What is an ORCiD?

ORCiD (Open Researcher & Contributor ID) is a tool to help you distinguish your name in the digital haystack. The contents of an ORCiD are like a Wikipedia bio that you create and manage: your name, educational history, employment history, grant funding, and “works” that can range from conventional academic publications to artistic performances - as much or as little detail as you see fit to include. The ORCiD ID itself is a smart URL that you can use to link your works with your name in a way that computers understand. Registration for an ORCiD is free of charge and fast.

Why should JMU Faculty get an ORCiD?

Think of your ORCiD as a digital fingerprint. ORCiD IDs help computer networks keep track of your publications, associating your name, and no other, with your works, even if your name is a common one like “Jane Smith.” Increasing numbers of publishers and funding agencies require ORCiD IDs for all authors and applicants. Remember: the content of your ORCiD profile is exclusively yours - you are in charge of your online public identity.

And, part of the Madison Plan involves bringing favorable publicity to the institution. Creation of an ORCiD profile, with a correct attribution of JMU as an employer or degree-granting institution, materially promotes the reputation of JMU by linking your name and your achievements with the university.

Help Google to help JMU by creating and maintaining your ORCiD profile.

JAMES MADISON
Wants YOU to get an ORCiD
Step 1: Create an ORCiD

Point your browser to http://orcid.org/register. Fill in your first name, last name, preferred email, and password (write it down!).

Next, add as much information to your ORCiD as you can. It is especially important to add your websites and other researcher identifiers, like Google Scholar Profile and ResearcherID. Don’t forget to add “James Madison University” to the Education or Employment section – it lends internet fame (visibility) to JMU.

Step 2: Learn to use your ORCiD

Add your ID (ex: orcid.org/0000-0003-2861-3477) to all of your publications. If the publisher does not provide a dedicated field for it, include it in your institutional affiliation in a footnote or endnote.

Add it to all your grant/funding request applications.

Add it to your researcher profiling systems, like Scopus Author ID, ResearcherID, Google Scholar Profile, LinkedIn. In order to help the computers make accurate reciprocal cross links, add your researcher profiling system IDs to your ORCiD profile, under “Other IDs” or “Websites.”

Add it to the profiles you maintain for the professional organizations to which you belong.

Add it to your email signature.

Add it to your CV — this is particularly important if your CV is online.

When the time rolls around for updating your JMU business card, consider adding your ORCiD ID to it.

If it is appropriate for your professional goals, add it to your social media profiles.

Step 3: Try some ORCiD integrations

Your ORCiD profile can be configured to import your bibliographies from Scopus, Web of Science, CrossRef, Modern Language Association International Bibliography, and others.
